

# Warning, first thing!

You purchased your safe with a combination lock supplied by FJM Security Products. This is either a 3 or 4 digit combination. Setting your personal combination is best done before installing the product.

Be sure and follow this procedure

First, make sure you change the combination with the unit open. If you make a error with the unit closed, you will have a serious problem.

1. The lock's combination is set at the factory with all zeros.
2. Make sure the lock is set on all zeros.
3. Turn the outer ring until the change button comes into view.
4. Insert the included push pin or similar object in the change button hole depressing the button.
5. While the button is depressed, turn the number dials to your preferred combination. It is safer to do one number at a time checking each one.
6. Release the change button, and turn the lock CW and then CCW.
7. Turn the numbers and make sure the lock won't turn.
8. Enter your code and try again, if it works, you are set to go.
9. Keep these instructions & tool in case you ever wish to change the code.
